

Products and the knowledge for a healthy home.

For over a decade, Earth Contact Products (ECP) has grown to be the most trusted name for foundation repair and waterproofing products. As patent and trademark holders on over 18 items, we supply the very best products, service and support to our national network of contractors. ECP is dedicated to our contractors and the people they serve, by providing the highest quality products and systems in the industry.

Designed and Engineered to Perform

Sub-Surface Exterior Waterproofing:

In some cases, applying an exterior membrane to foundation walls is the best option. ECP offers exterior products such as heavy-duty roll-on membranes, peel and stick armor sheeting and other accessories to help with an easy application.

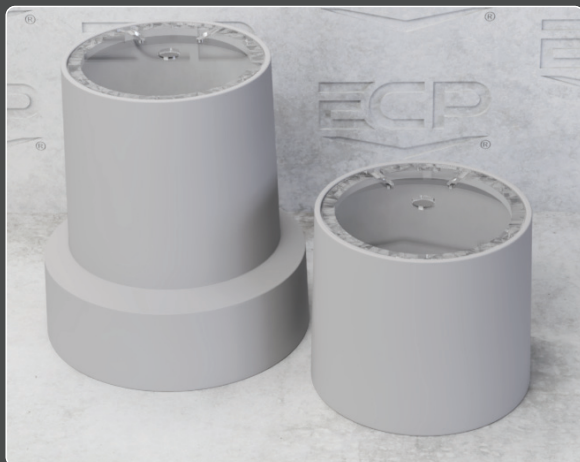

Water Channel:

ECP offers a Water Channel accessory for interior water management. Our Water Channel is a floor drainage system that creates a break between the footing and the slab allowing water to pass freely to the underlying drain tile for an easy exit!

Sump Basins/Pits:

Our patented bell basin is uniquely designed to allow more water in and lengthening the life of the sump pump by preventing short cycling of the pumps float switch. We offer non-perforated pits, extensions, 2-part basins and more!

Sump Pumps:

Our pro series pumps come in many sizes and varieties. We offer singular main pumps to combo units with battery backups and all the accessory add-ons you might need for any specific situation. All our pro series pumps have a warranty range from 3-5 years AFTER installation!

Vapor Barriers/Encapsulations:

ECP's 12 mils and 20 mils crawl space vapor barriers are two sheets of high strength virgin Polyethylene film laminated together with a third layer of molten Polyethylene. We offer a variety of different sized barriers, dehumidifiers, and accessories for a completed encapsulation!

Carbon Fiber:

From bowing walls to crack repairs to crack locks; anything carbon fiber related we've got you covered. Any standard basement wall is easily fixed with our range from 7-10' bowing wall kits. Want to buy in bulk and cut to size? Not a problem with our 164' roll package!

Form-A-Drain:

ECP's high end PVC drain tile makes for easy water management. Whether you're forming footers for new construction or applying it to an already finished foundation, Form-A-drain is an easy install with our multiple degree angled couplings and accessories!

Crack Injections:

ECP offers top-of-the-line injection products. From surface pastes to polyurethanes to structural resins, ECP has everything you need to properly address crack issues.

The ECP Drainage System is a permanent solution for your home's wet basement. We provide you the very best option to solve your basement water problems for good! The ECP Drainage System is an interior water management system that is installed under your floor, around the perimeter of your basement in the affected areas. The water is then directed through the system to the ECP Sump System for discharge.

- Drainage System = Healthy Basement
- Permanent, Cost Effective Solution
- Removes All Water, Even Under Slab
- The Right Choice!

The most energy efficient, money saving sump system in the industry!

Drainage System

Allows Cold Joint and Wall Drainage

Higher Volume Drain Pipe Placed Next to Footing

Washed Stone to Filter Sediment

Sump System

Clear, Sealed Lid

Dual Float Switch for Added Flood Protection

Powerful, Energy Efficient Pumps

Bell Shaped Design for Increased Volume
