ECP
WATERPROOFING

ABOUT US

ECP is one of the largest manufacturers of helical anchors, steel piers, Polypier, and waterproofing products. In partnership with our installing contractors, we drive positive and sustainable technological advances and growth within the foundation repair, utility, pipeline, waterproofing, and general contracting businesses.

Earth Contact Products is committed to supplying quality products, services, and performance that consistently meet the needs of our customers. We are equally committed to continual improvement in every aspect of our business.

PRODUCTS

Sub-Surface Exterior Waterproofing

ECP offers exterior products such as heavy-duty roll-on membranes, peel and stick armor sheeting and other accessories to help with an easy application.

Water Channel

Our Water Channel is a floor drainage system that creates a break between the footing and the slab allowing water to pass freely to the underlying drain tile for an easy exit!

Sump Basins/Pits

Our patented bell basin is uniquely designed to allow more water in and lengthening the life of the sump pump by preventing short cycling of the pumps float switch. We offer non-perforated pits, extensions, 2-part basins and more!

Sump Pumps

Our pro series pumps come in many sizes and varieties. We offer singular main pumps to combo units with battery backups and all the accessory add-ons you might need for any specific situation.

Vapor Barriers/Encapsulations

ECP's 12 mils and 20 mils crawl space vapor barriers are two sheets of high strength virgin Polyethylene film laminated together with a third layer of molten Polyethylene. We offer a variety of different sized barriers, dehumidifiers, and accessories for a completed encapsulation!

Carbon Fiber

From bowing walls to crack repairs to crack locks; anything carbon fiber related we've got you covered. Any standard basement wall is easily fixed with our range from 7-10' bowing wall kits.

Form-A-Drain

ECP's high end PVC drain tile makes for easy water management. Whether you're forming footers for new construction or applying it to an already finished foundation, Form-A-drain is an easy install with our multiple degree angled couplings and accessories!

Crack Injections

ECP offers top-of-the-line injection products. From surface pastes to polyurethanes to structural resins, ECP has everything you need to properly address crack issues.

TRAINING/EDUCATION

ECP provides support and training to contractors and professionals using steel piers, polypier, and waterproofing products. This commitment to professional development ensures that those utilizing ECP's products have the knowledge and skills necessary for proper installation and application.
