

NORTH AMERICAN SPECIALTY PRODUCTS

 **Form-A-Drain®**

Protecting your basement

Protecting your basement ... the foundation for solid peace of mind.

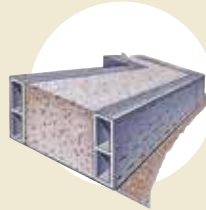

North American Specialty Products offers solid ways to reinforce it.

Water, water everywhere ...

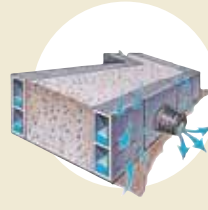

It's inevitable; a home will be surrounded by water many, many times. If your foundation—the very base for a well-constructed home—doesn't have the proper level of protection, that water can create problems both seen and unseen.

Form-A-Drain® from North American Specialty Products is the formula for foundation peace of mind. It does so by performing three of the most vital foundation functions:

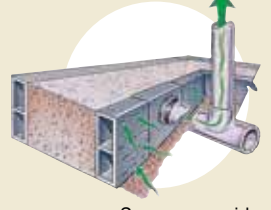

Forming
the footing

Draining the
foundation

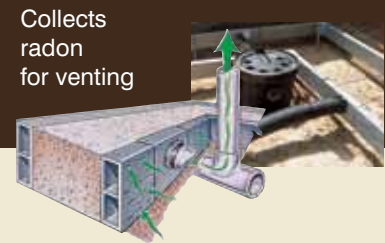

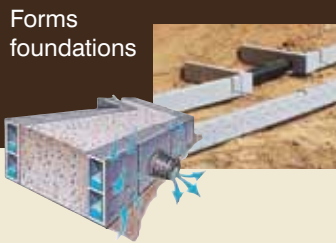

Provides for
radon reduction

This permanently installed system offers a unique combination of features and benefits:

The features

- Ideally located: parallel to footing below foundation wall
- Drainage system cannot sag or crimp
- Superior water intake capacity over traditional drain pipe (Sizes: 6", 8" and 10")
- Strong, rigid PVC construction

The benefits

- Relieves hydrostatic pressure on walls and slabs (reduces the likelihood of cracking)
- Reduces risk of blockage or uneven drainage
- Ensures rapid collection of ground water (minimizes basement water infiltration)
- Reduces system failures due to collapsed or crushed drainage system

Performance that pummels perforated pipe

Form-A-Drain is an outstanding alternative to perforated pipe, offering greater water intake capacity than traditional drain pipe. Its strong, rigid construction is an assurance of quality performance and installation.

Each lineal section is manufactured with one slotted wall, allowing water collection at the footing. Collected water then flows through the hollow core of Form-A-Drain to the drainage outlet, where it is safely discharged away from the home.

With Form-A-Drain the foundation system is located at the top and on both sides of the footing, just where it should be. This is the optimum area of the home's foundation, where water can be effectively collected and ultimately discharged away from valuable living or storage space.

Protecting treasures, traditions and trophies

Protecting your foundation also means protecting your personal belongings; furnishings and those treasures most dear to a family. Many of these items simply cannot be replaced. Protecting them from water is just another way Form-A-Drain performs for you.

Radon reduced, reassurance increased

Form-A-Drain forms a complete loop around the inside perimeter of the footing, serving as a radon collection point for venting (conforms to EPA Model Standards & Techniques for Radon Control in New Residential Buildings).

Form-A-Drain has earned some treasured trophies all its own

Builder Magazine's Brand Use Study ranked Form-A-Drain the overall brand leader among all similar products. More than 10,000 builders participated. Readex Research asked these professionals to rank products based on familiarity, frequency of use and overall quality. Form-A-Drain was their undisputed top choice across all categories.

A friend in, and to, the earth

Form-A-Drain lineals are manufactured from 100% pre- and post-consumer polyvinyl chloride (PVC). The product remains in place after the concrete is poured. The overall pre- and post-consumer recycled content of Form-A-Drain systems is 92%.
